

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1. Canceled.

2. Canceled.

3. (Currently Amended) ~~The modular data storage system of claim 1, A modular data storage system for handling and storing data cartridges, comprising:~~

a) a cartridge access device;

b) at least two laterally adjacent modular units, each of said modular units comprising:

i) a plurality of cartridge receiving devices;

ii) a first elongate gear rack having first and second ends and aligned along a displacement path;

iii) a first elongate guide member integral with said first elongate gear rack and extending along the displacement path substantially between the first and second ends of said first elongate gear rack;

iv) a first bearing mounted to the cartridge access device, said first bearing engaging said first elongate guide member, wherein said first elongate guide member comprises first and second opposed bearing surfaces and wherein said first bearing mounted to the cartridge access device slidably engages the first and second opposed bearing surfaces of said first elongate guide member;

v) a second elongate gear rack aligned along said displacement path and positioned in spaced-apart relation to said first elongate gear rack; and

vi) wherein the first elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, and the second elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, such that said cartridge access device may be translated among said laterally adjacent modular units;

c) a translation apparatus for moving a cartridge access device along a displacement path, comprising:

i) a first drive pinion mounted to the cartridge access device, said first drive pinion engaging said first elongate gear rack;

ii) a second drive pinion mounted to the cartridge access device, said second drive pinion engaging said second elongate gear rack; and

iii) a pinion drive apparatus operatively associated with said first and second drive pinions, said pinion drive apparatus rotating said first and second drive pinions to move the cartridge access device among the first and second elongate gear racks of said laterally adjacent modular units.

4. (Previously Presented) The modular data storage system of claim 3, wherein said second elongate gear rack includes a second elongate guide member that extends along the displacement path substantially between the first and second ends of said second elongate gear rack and wherein said translation apparatus further comprises a second bearing mounted to the cartridge

Serial No. 10/623,372

access device, said second bearing engaging said second elongate guide member.

5. (Previously Presented) The modular data storage system of claim 4, wherein said second elongate guide member comprises first and second opposed bearing surfaces and wherein said second bearing mounted to the cartridge access device slidably engages the first and second opposed bearing surfaces of said second elongate guide member.

6. (Previously Presented) The modular data storage system of claim 5, further comprising a third bearing mounted to the cartridge access device, said third bearing contacting said first elongate gear rack and allowing the cartridge access device to move along the displacement path.

7. (Previously Presented) The modular data storage system of claim 6, wherein said third bearing comprises a wheel.

8. (Previously Presented) A modular data storage system for handling and storing data cartridges, comprising:

- a) a cartridge access device;
- b) at least two laterally adjacent modular units, each of said modular units comprising:
 - i) a plurality of cartridge receiving devices;
 - ii) a first elongate gear rack aligned along a displacement path;
 - iii) a second elongate gear rack aligned along said displacement path and positioned in spaced-apart relation to said first elongate gear rack;
 - iv) wherein the first elongate gear racks of said laterally adjacent modular units are

substantially in alignment with one another, and the second elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, such that said cartridge access device may be translated among said laterally adjacent modular units;

v) a third elongate gear rack positioned in generally parallel, spaced-apart relation to said first elongate gear rack;

vi) a fourth elongate gear rack positioned in generally parallel, spaced-apart relation to said second elongate gear rack so that said first, second, third, and fourth elongate gear racks define a generally rectangular, parallelopiped configuration with said first and third elongate gear racks defining a bottom side of the generally rectangular, parallelopiped configuration and said second and fourth elongate gear racks defining a top side of the generally rectangular, parallelopiped configuration; and

vii) wherein the third elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, and the fourth elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, such that said cartridge access device may be translated among said laterally adjacent modular units;

c) a translation apparatus for moving a cartridge access device along a displacement path, comprising:

i) a first drive pinion mounted to the cartridge access device, said first drive pinion engaging said first elongate gear rack;

ii) a second drive pinion mounted to the cartridge access device, said second drive pinion engaging said second elongate gear rack; and

iii) a pinion drive apparatus operatively associated with said first and second drive pinions, said pinion drive apparatus rotating said first and second drive pinions to move the cartridge access device among the first and second elongate gear racks of said laterally adjacent modular units.

9. (Previously Presented) The modular data storage system of claim 8, further comprising:

a) a third drive pinion mounted to the cartridge access device and operatively associated with said pinion drive apparatus, said third drive pinion engaging said third elongate gear rack; and

b) a fourth drive pinion mounted to the cartridge access device and operatively associated with said pinion drive apparatus, said fourth drive pinion engaging said fourth elongate gear rack.

10. (Currently Amended) ~~The modular data storage system of claim 1 A modular data storage system for handling and storing data cartridges, comprising:~~

a) a cartridge access device;

b) at least two laterally adjacent modular units, each of said modular units comprising:

i) a plurality of cartridge receiving devices;

ii) a first elongate gear rack having first and second ends and aligned along a displacement path;

iii) a first elongate guide member integral with said first elongate gear rack and extending along the displacement path substantially between the first and second ends of said first elongate gear rack;

iv) a first bearing mounted to the cartridge access device, said first bearing engaging said first elongate guide member;

v) a second elongate gear rack aligned along said displacement path and positioned in spaced-apart relation to said first elongate gear rack; and

vi) wherein the first elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, and the second elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, such that said cartridge access device may be translated among said laterally adjacent modular units;

c) a translation apparatus for moving a cartridge access device along a displacement path, comprising:

i) a first drive pinion mounted to the cartridge access device, said first drive pinion engaging said first elongate gear rack;

ii) a second drive pinion mounted to the cartridge access device, said second drive pinion engaging said second elongate gear rack; and

iii) a pinion drive apparatus operatively associated with said first and second drive pinions, said pinion drive apparatus rotating said first and second drive pinions to move the cartridge access

device among the first and second elongate gear racks
of said laterally adjacent modular units, wherein said
pinion drive apparatus comprises:

- a) a motor having a shaft;
- b) a worm attached to the shaft of said motor;
and
- c) a worm gear operatively connected to said
first and second drive pinions, said worm gear mounted
to engage said worm mounted to the shaft of said
motor.

11. Canceled.

12. Canceled.

13. (Currently Amended) ~~The modular data storage system~~
~~of claim 11 A modular data storage system for handling and~~
~~storing data cartridges, comprising:~~

- a) a cartridge access device;
- b) a master modular unit and at least one slave
modular unit, each of said modular units being positioned
adjacent one another to form laterally adjacent modular
units, each of said modular units comprising:
 - i) a plurality of cartridge receiving devices;
 - ii) a first elongate gear rack having first and
second ends and aligned along a displacement path;
 - iii) a first elongate guide member integral with
said first elongate gear rack and extending along the
displacement path substantially between the first and
second ends of said first elongate gear rack;

iv) a first bearing mounted to the cartridge access device, said first bearing engaging said first elongate guide member;

v) a second elongate gear rack aligned along said displacement path and positioned in spaced-apart relation to said first elongate gear rack; and

vi) wherein the first elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, and the second elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, such that said cartridge access device may be translated among said laterally adjacent modular units;

c) a translation apparatus for moving a cartridge access device along a displacement path, comprising:

i) a first drive pinion mounted to the cartridge access device, said first drive pinion engaging said first elongate gear rack;

ii) a second drive pinion mounted to the cartridge access device, said second drive pinion engaging said second elongate gear rack; and

iii) a pinion drive apparatus operatively associated with said first and second drive pinions, said pinion drive apparatus rotating said first and second drive pinions to move the cartridge access device among the first and second elongate gear racks of said laterally adjacent modular units;

d) said master modular unit further comprising a power supply, wherein each of said slave modular units which require electrical power is electrically connected to said power supply in said master modular unit.

14. Canceled.

15. (Currently Amended) ~~The modular data storage system of claim 11 A modular data storage system for handling and storing data cartridges, comprising:~~

- a) a cartridge access device;
- b) a master modular unit and at least one slave modular unit, each of said modular units being positioned adjacent one another to form laterally adjacent modular units, each of said modular units comprising:
 - i) a plurality of cartridge receiving devices;
 - ii) a first elongate gear rack having first and second ends and aligned along a displacement path;
 - iii) a first elongate guide member integral with said first elongate gear rack and extending along the displacement path substantially between the first and second ends of said first elongate gear rack;
 - iv) a first bearing mounted to the cartridge access device, said first bearing engaging said first elongate guide member, wherein said first elongate guide member comprises first and second opposed bearing surfaces and wherein said first bearing mounted to the cartridge access device slidably engages the first and second opposed bearing surfaces of said first elongate guide member;
 - v) a second elongate gear rack aligned along said displacement path and positioned in spaced-apart relation to said first elongate gear rack; and
 - vi) wherein the first elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, and the second elongate gear racks of said laterally adjacent

modular units are substantially in alignment with one another, such that said cartridge access device may be translated among said laterally adjacent modular units;

c) a translation apparatus for moving a cartridge access device along a displacement path, comprising:

i) a first drive pinion mounted to the cartridge access device, said first drive pinion engaging said first elongate gear rack;

ii) a second drive pinion mounted to the cartridge access device, said second drive pinion engaging said second elongate gear rack; and

iii) a pinion drive apparatus operatively associated with said first and second drive pinions, said pinion drive apparatus rotating said first and second drive pinions to move the cartridge access device among the first and second elongate gear racks of said laterally adjacent modular units;

d) said master modular unit further comprising a power supply.

16. (Previously Presented) The modular data storage system of claim 15, wherein said second elongate gear rack includes a second elongate guide member that extends along the displacement path substantially between the first and second ends of said second elongate gear rack and wherein said translation apparatus further comprises a second bearing mounted to the cartridge access device, said second bearing engaging said second elongate guide member.

17. (Previously Presented) The modular data storage system of claim 16, wherein said second elongate guide member comprises

first and second opposed bearing surfaces and wherein said second bearing mounted to the cartridge access device slidably engages the first and second opposed bearing surfaces of said second elongate guide member.

18. (Previously Presented) The modular data storage system of claim 17, further comprising a third bearing mounted to the cartridge access device, said third bearing contacting said first elongate gear rack and allowing the cartridge access device to move along the displacement path.

19. (Previously Presented) The modular data storage system of claim 18, wherein said third bearing comprises a wheel.

20. (Currently Amended) ~~The modular data storage system of claim 11, A modular data storage system for handling and storing data cartridges, comprising:~~

- a) a cartridge access device;
- b) a master modular unit and at least one slave modular unit, each of said modular units being positioned adjacent one another to form laterally adjacent modular units, each of said modular units comprising:
 - i) a plurality of cartridge receiving devices;
 - ii) a first elongate gear rack having first and second ends and aligned along a displacement path;
 - iii) a first elongate guide member integral with said first elongate gear rack and extending along the displacement path substantially between the first and second ends of said first elongate gear rack;
 - iv) a first bearing mounted to the cartridge access device, said first bearing engaging said first elongate guide member;

v) a second elongate gear rack aligned along said displacement path and positioned in spaced-apart relation to said first elongate gear rack;

vi) wherein the first elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, and the second elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, such that said cartridge access device may be translated among said laterally adjacent modular units; each of said modular units further comprising:

a) vii) a third elongate gear rack positioned in generally parallel, spaced-apart relation to said first elongate gear rack;

b) viii) a fourth elongate gear rack positioned in generally parallel, spaced-apart relation to said second elongate gear rack so that said first, second, third, and fourth elongate gear racks define a generally rectangular, parallelopiped configuration with said first and third elongate gear racks defining a bottom side of the generally rectangular, parallelopiped configuration and said second and fourth elongate gear racks defining a top side of the generally rectangular, parallelopiped configuration; and

c) ix) wherein the third elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, and the fourth elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, such that said cartridge access device may be

translated among said laterally adjacent modular units;

c) a translation apparatus for moving a cartridge access device along a displacement path, comprising:

i) a first drive pinion mounted to the cartridge access device, said first drive pinion engaging said first elongate gear rack;

ii) a second drive pinion mounted to the cartridge access device, said second drive pinion engaging said second elongate gear rack; and

iii) a pinion drive apparatus operatively associated with said first and second drive pinions, said pinion drive apparatus rotating said first and second drive pinions to move the cartridge access device among the first and second elongate gear racks of said laterally adjacent modular units;

d) said master modular unit further comprising a power supply.

21. (Previously Presented) The modular data storage system of claim 20, said translation apparatus further comprising:

a) a third drive pinion mounted to the cartridge access device and operatively associated with said pinion drive apparatus, said third drive pinion engaging said third elongate gear rack; and

b) a fourth drive pinion mounted to the cartridge access device and operatively associated with said pinion drive apparatus, said fourth drive pinion engaging said fourth elongate gear rack.

22. (Currently Amended) The modular data storage system of claim 11, A modular data storage system for handling and storing data cartridges, comprising:

- a) a cartridge access device;
- b) a master modular unit and at least one slave modular unit, each of said modular units being positioned adjacent one another to form laterally adjacent modular units, each of said modular units comprising:
 - i) a plurality of cartridge receiving devices;
 - ii) a first elongate gear rack having first and second ends and aligned along a displacement path;
 - iii) a first elongate guide member integral with said first elongate gear rack and extending along the displacement path substantially between the first and second ends of said first elongate gear rack;
 - iv) a first bearing mounted to the cartridge access device, said first bearing engaging said first elongate guide member;
 - v) a second elongate gear rack aligned along said displacement path and positioned in spaced-apart relation to said first elongate gear rack; and
 - vi) wherein the first elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, and the second elongate gear racks of said laterally adjacent modular units are substantially in alignment with one another, such that said cartridge access device may be translated among said laterally adjacent modular units;
- c) a translation apparatus for moving a cartridge access device along a displacement path, comprising:
 - i) a first drive pinion mounted to the cartridge access device, said first drive pinion engaging said first elongate gear rack;

ii) a second drive pinion mounted to the cartridge access device, said second drive pinion engaging said second elongate gear rack; and

iii) a pinion drive apparatus operatively associated with said first and second drive pinions, said pinion drive apparatus rotating said first and second drive pinions to move the cartridge access device among the first and second elongate gear racks of said laterally adjacent modular units, wherein said pinion drive apparatus comprises:

- a) a motor having a shaft;
- b) a worm attached to the shaft of said motor; and
- c) a worm gear operatively connected to said first and second drive pinions, said worm gear mounted to engage said worm mounted to the shaft of said motor; and
- d) said master modular unit further comprising a power supply.

23. Canceled.
